# Chapter 1

## Todo List

Global **main** (int argC, char \*\*argV)

Work in Progress : Add conditionnal fork:

- if there are arguments in the program call, just translates the input string and exit (or print error message)
- if there is no argument, go to the infinite loop to use the program until asked to quit

Global **translate\_into\_obscure** (char \*input, unsigned char \*output)

Work In Progress : calculate consonant translation

## Chapter 2

# File Index

### 2.1 File List

Here is a list of all files with brief descriptions:

<a href="#">deprecated_functions.c</a>	5
<a href="#">deprecated_functions.h</a>	6
<a href="#">main.c</a>	7

## Chapter 3

# File Documentation

### 3.1 deprecated\_functions.c File Reference

```
#include <stdio.h>
#include <stdlib.h>
#include <string.h>
#include <stdbool.h>
#include "deprecated_functions.h"
```

#### Functions

- void [shift\\_letters](#) (void)  
*Shift letters from upper case to lower case or from lower case to upper case.*
- void [character\\_bit\\_shifting](#) (void)  
*Bit shifts a string of character to make it unreadable.*

#### Variables

- const char [input\\_table](#) [] = "I think you know my point about inline if operations : it only obfuscates the code.\n"
- const char [bit\\_shifted\\_char\\_table](#) []

#### 3.1.1 Function Documentation

##### 3.1.1.1 void character\_bit\_shifting ( void )

Bit shifts a string of character to make it unreadable.

Definition at line 89 of file deprecated\_functions.c.

References [input\\_table](#).

### 3.1.1.2 void shift\_letters ( void )

Shift letters from upper case to lower case or from lower case to upper case.

Definition at line 40 of file deprecated\_functions.c.

References SHIFT\_VAL.

## 3.1.2 Variable Documentation

### 3.1.2.1 const char bit\_shifted\_char\_table[]

Initial value:

```
=
{
    0x92, 0x40, 0xe8, 0xd0, 0xd2, 0xdc, 0xd6, 0x40, 0xf2, 0xde, 0xea, 0x40, 0xd6, 0xdc, 0xde, 0xee, 0x40,
    0xda, 0xf2,
    0x40, 0xe0, 0xde, 0xd2, 0xdc, 0xe8, 0x40, 0xc2, 0xc4, 0xde, 0xea, 0xe8, 0x40, 0xd2, 0xdc, 0xd8, 0xd2,
    0xdc, 0xca,
    0x40, 0xd2, 0xcc, 0x40, 0xde, 0xe0, 0xca, 0xe4, 0xc2, 0xe8, 0xd2, 0xde, 0xdc, 0xe6, 0x40, 0x74, 0x40,
    0xd2, 0xe8,
    0x40, 0xde, 0xdc, 0xd8, 0xf2, 0x40, 0xde, 0xc4, 0xcc, 0xea, 0xe6, 0xc6, 0xc2, 0xe8, 0xca, 0xe6, 0x40,
    0xe8, 0xd0,
    0xca, 0x40, 0xc6, 0xde, 0xc8, 0xca, 0x5c
}
```

Definition at line 18 of file deprecated\_functions.c.

### 3.1.2.2 const char input\_table[] = "I think you know my point about inline if operations : it only obfuscates the code.\n"

Definition at line 17 of file deprecated\_functions.c.

Referenced by character\_bit\_shifting().

## 3.2 deprecated\_functions.h File Reference

### Macros

- #define [SHIFT\\_VAL](#) ('a'-'A')

### Functions

- void [shift\\_letters](#) (void)  
*Shift letters from upper case to lower case or from lower case to upper case.*
- void [character\\_bit\\_shifting](#) (void)  
*Bit shifts a string of character to make it unreadable.*

### 3.2.1 Macro Definition Documentation

#### 3.2.1.1 #define SHIFT\_VAL ('a'-'A')

Definition at line 6 of file deprecated\_functions.h.

Referenced by shift\_letters().

### 3.2.2 Function Documentation

#### 3.2.2.1 void character\_bit\_shifting ( void )

Bit shifts a string of character to make it unreadable.

Definition at line 89 of file deprecated\_functions.c.

References input\_table.

#### 3.2.2.2 void shift\_letters ( void )

Shift letters from upper case to lower case or from lower case to upper case.

Definition at line 40 of file deprecated\_functions.c.

References SHIFT\_VAL.

## 3.3 main.c File Reference

```
#include <stdio.h>
#include <stdlib.h>
#include <string.h>
#include <stdbool.h>
```

### Macros

- #define [SHIFT\\_VAL](#) ('a'-'A')
- #define [ever](#) (;;)
- #define [forever](#) for [ever](#)

### Functions

- bool [is\\_a\\_vowel](#) (char letter\_to\_analyse)  
*Tells if the character given in argument is a vowel or not.*
- int [calculate\\_vowel\\_translation](#) (char vowel, unsigned char \*p\_out\_buffer, int \*p\_offset)  
*Calculate the translation of a vowel into consonant.*
- int [translate\\_into\\_obscure](#) (char \*input, unsigned char \*output)  
*Translation loop function.*
- int [main](#) (int argc, char \*\*argv)  
*Main program function.*

## Variables

- const char `vowels` [] = { 'a', 'e', 'i', 'o', 'u', 'y' }
- const char `consonants` [] = { 'b', 'c', 'd', 'f', 'g', 'h', 'j', 'k', 'l', 'm', 'n', 'p', 'q', 'r', 's', 't', 'v', 'w', 'x', 'z' }
- const char `message_str` [] = "i think you know my point about inline if operations : it only obfuscates the code."

### 3.3.1 Macro Definition Documentation

#### 3.3.1.1 `#define ever (;;)`

Definition at line 20 of file main.c.

#### 3.3.1.2 `#define forever for ever`

Definition at line 21 of file main.c.

Referenced by `main()`.

#### 3.3.1.3 `#define SHIFT_VAL ('a'-'A')`

#### Note

it might be of use to add the following line

Definition at line 17 of file main.c.

### 3.3.2 Function Documentation

#### 3.3.2.1 `int calculate_vowel_translation ( char vowel, unsigned char * p_out_buffer, int * p_offset )`

Calculate the translation of a vowel into consonant.

#### Parameters

in	<i>vowel</i>	Vowel character to translate into consonant character
out	<i>p_out_buffer</i>	Pointer onto output buffer
out	<i>p_offset</i>	Pointer onto offset value to set

#### Returns

An error value :

- 0 if OK
- (-1) if failure

Definition at line 49 of file main.c.

Referenced by `translate_into_obscure()`.

### 3.3.2.2 `bool is_a_vowel ( char letter_to_analyse )`

Tells if the character given in argument is a vowel or not.

#### Parameters

in	<i>letter_to_analyse</i>	Character that we will tell if its a vowel or not
----	--------------------------	---

#### Returns

A boolean value :

- true : *letter\_to\_analyse* is a vowel
- false : *letter\_to\_analyse* is a consonant

Definition at line 89 of file main.c.

References vowels.

Referenced by `translate_into_obscure()`.

### 3.3.2.3 `int main ( int argC, char ** argV )`

Main program function.

**Todo** Work in Progress : Add conditionnal fork:

- if there are arguments in the program call, just translates the input string and exit (or print error message)
- if there is no argument, go to the infinite loop to use the program until asked to quit

#### Remarks

print which option has been chosen (encode or decode) (this line is only here for debug)  
just print the input string for now (translation part of the program is not finished)

Definition at line 140 of file main.c.

References forever.

### 3.3.2.4 `int translate_into_obscure ( char * input, unsigned char * output )`

Translation loop function.

**Parameters**

in	<i>input</i>	String that contains the original message
out	<i>output</i>	Buffer in which we would write the resulting string

**Returns**

An int value :

- 0 if everything is OK
- (-1) if process ends in error

**Todo** Work In Progress : calculate consonant translation

Definition at line 115 of file main.c.

References calculate\_vowel\_translation(), is\_a\_vowel(), and mesage\_str.

### 3.3.3 Variable Documentation

**3.3.3.1** `const char consonants[] = { 'b', 'c', 'd', 'f', 'g', 'h', 'j', 'k', 'l', 'm', 'n', 'p', 'q', 'r', 's', 't', 'v', 'w', 'x', 'z' }`

Definition at line 25 of file main.c.

**3.3.3.2** `const char mesage_str[] = "i think you know my point about inline if operations : it only obfuscates the code."`

Definition at line 27 of file main.c.

Referenced by translate\_into\_obscure().

**3.3.3.3** `const char vowels[] = { 'a', 'e', 'i', 'o', 'u', 'y' }`

Definition at line 24 of file main.c.

Referenced by is\_a\_vowel().
